1. Executive Summary

OVAX-AI is an AI platform that provides global legal intelligence for assets. Our AI helps users understand asset-related laws, regulations, and legal risks across multiple jurisdictions, while connecting them with trusted legal professionals when expert assistance is needed.

Instead of leaving people to piece together fragmented, jurisdiction-specific legal information on their own, OVAX-AI combines a continuously updated legal knowledge base, an AI assistant that explains regulations in plain language, and a referral network of independent legal professionals — in a single platform.

The native token of the ecosystem, \$OVAX, has a fixed total supply of 100,000,000 units. \$OVAX is the unit of account for accessing platform features, staking, governance, and referral rewards.

What OVAX-AI is — and is not

OVAX-AI is an AI-powered legal information assistant with professional referral support. It is not a law firm, does not provide legal advice, does not guarantee asset protection or recovery, and does not issue official legal conclusions. Where a matter requires licensed expertise, OVAX-AI helps connect users to independent legal professionals — it does not replace them.

Key differentiators

- **AI-first legal search.** Plain-language answers instead of dense regulatory text.
- **Global jurisdiction coverage.** Compare how different countries treat the same asset question.
- **Professional referral network.** Connect with independent lawyers when expert input is needed.
- **Built for transparency.** Designed to support informed, compliant decisions — not anonymous transactions.
- **Hard-capped \$OVAX supply.** 100,000,000 tokens, no inflation, no hidden mints.

2. What Is OVAX-AI?

OVAX-AI is an AI platform that provides global legal intelligence for assets. Users can ask about:

- Digital assets and cryptocurrency
- Real estate
- Ownership rights
- Investment and contracts
- Inheritance, transfer, and asset protection
- Country-specific regulation

OVAX-AI searches a structured legal knowledge base, synthesizes the relevant material, and presents it back in plain language — turning dense regulatory text into answers a non-lawyer can actually use.

This positioning is a deliberate choice. Rather than asking users to trust an opaque "black box," OVAX-AI is built to show its work: what sources informed an answer, which jurisdiction it applies to, and when a question has moved beyond what general information can safely address.

OVAX-AI should not be understood as

A law firm • An AI lawyer replacing a real lawyer • A system that guarantees asset protection or recovery • A global lawyer network (until that network is fully built out) • A platform that issues official legal conclusions.

3. The OVAX-AI Platform

3.1 Ask -> Understand -> Connect

The product can be described in three steps:

- **Ask.** The user asks a plain-language question about asset-related law.
- **Understand.** The AI searches, synthesizes, and explains the relevant regulations, documents, and risks.
- **Connect.** When a matter needs professional judgment, OVAX-AI helps the user reach a suitable independent lawyer.

3.2 Platform Layers

Layer	What it does
Legal Knowledge Database	Structured, continuously updated laws, regulations, and asset-related legal content across jurisdictions.
AI Legal Assistant	Answers user questions and explains the relevant rules in plain language.
Jurisdiction Comparison	Shows how different countries or regions treat the same asset question.
Lawyer Connection	Routes users to independent lawyers by expertise and jurisdiction when expert input is needed. This network is being built out over time.

4. Tools & Features

The following tools make up the OVAX-AI toolkit. Each is designed around a single principle: reduce a complex legal question to something a non-specialist can act on with confidence.

Legal Search

Ask a plain-language question and receive a structured answer grounded in the legal knowledge base, with the sources it drew from.

Risk Briefing

Before a major decision — buying a digital asset, structuring an investment, transferring property — get a plain-language summary of the legal risks involved.

Document Review Assist

AI-assisted review of common documents (purchase agreements, disclosures, terms) to flag areas worth a professional's attention.

Jurisdiction Comparison Tool

Compare how a specific asset question is treated across different countries side by side.

Lawyer Directory & Referral

Browse or request an introduction to an independent lawyer by jurisdiction and specialty. The network is expanding over time.

5. Our Team

OVAX-AI is built by a small, cross-functional team spanning AI product strategy, operations, security, communications, advisory, and ecosystem development.

Michael H. Rubin

Founder & CEO

Founder of OVAX-AI with a focus on AI infrastructure, blockchain applications, and digital asset compliance. Leads product strategy, ecosystem development, and long-term vision for building accessible AI-powered legal services for the global digital asset industry.

Expertise: AI Strategy • Blockchain Infrastructure • Product Vision • Digital Asset Compliance

Fiona M. Maclean

Co-Founder & Chief Operations Officer

Oversees strategic operations, partnerships, and organizational development. Responsible for coordinating product delivery, ecosystem growth, and collaboration with legal and technology partners.

Expertise: Operations Management • Strategic Partnerships • Business Development • Project Execution

Margarita Kadochnikova

Head of Communications

Leads global communications, branding, and community engagement. Focused on building transparent communication between the project, users, and strategic partners.

Expertise: Public Relations • Brand Communications • Community Growth • Content Strategy

Alexey Malanov

Chief Security Scientist

Responsible for cybersecurity architecture, smart contract security, and risk assessment methodologies. Works on strengthening platform security and supporting secure digital asset management.

Expertise: Cybersecurity • Smart Contract Security • Risk Analysis • Security Research

Kayvon Hosseini

Head of Advisory

Provides strategic guidance on blockchain adoption, ecosystem partnerships, and long-term product planning. Supports cross-functional decision making between technology and business teams.

Expertise: Strategic Advisory • Blockchain Ecosystem • Market Development • Growth Strategy

Hudson Jameson

Head of Ecosystem

Leads ecosystem initiatives, developer relations, and community collaboration. Focuses on expanding integrations and encouraging adoption across Web3 communities.

Expertise: Developer Relations • Ecosystem Growth • Community Building • Open Collaboration

6. Tokenomics — The \$OVAX Token

The \$OVAX token is the unit of economic coordination inside the OVAX-AI platform. It is a utility-and-governance token with a fixed total supply of 100,000,000 units. No additional tokens will ever be minted. There is no inflationary emission, no hidden treasury mint function, and no admin key that can alter the supply schedule.

6.1 Token Summary

Field	Value
Token Name	OVAX-AI
Ticker Symbol	\$OVAX
Blockchain / Standard	Binance Smart Chain (BEP-20)
Total Supply	100,000,000 \$OVAX (hard-capped)
Decimals	18
Initial Circulating Supply	12,000,000 \$OVAX (12%)
Token Type	Utility + Governance
Inflation	None — no further minting possible
Deflationary Mechanism	Quarterly fee burn (up to 30% of network fees)

6.2 Allocation of the 100,000,000 \$OVAX Supply

Category	%	Tokens	Vesting
Ecosystem & Partner Rewards	25%	25,000,000	5% at TGE, linear over 48 months
Staking & Validator Rewards	20%	20,000,000	Released programmatically over 60 months
Team & Advisors	15%	15,000,000	12-month cliff, then linear over 36 months
Treasury & Legal Reserve	12%	12,000,000	Governance-controlled, 6-month cliff
Private Sale	10%	10,000,000	10% at TGE, linear over 18 months

Category	%	Tokens	Vesting
Liquidity & Market Making	8%	8,000,000	100% at TGE, locked in DEX/CEX pools
Public Sale / IDO	5%	5,000,000	100% unlocked at TGE
Airdrop & Community	5%	5,000,000	25% at TGE, remainder over 12 months
Total	100%	100,000,000	—

6.3 Utility of the \$OVAX Token

- **Platform fees.** Access to premium platform features is paid for in \$OVAX.
- **Staking.** Holders can stake surplus \$OVAX to earn rewards.
- **Governance.** \$OVAX holders vote on platform upgrades, Treasury disbursements, and grant programs.
- **Legal-module access.** Premium features, including expanded lawyer referral access, are gated by a minimum \$OVAX balance.
- **Referral rewards.** Users earn a 10% reward for referring someone who makes a purchase.
- **Ecosystem grants.** Builders and contributors can apply for grants denominated in \$OVAX.

6.4 Deflationary Mechanics

Each quarter, up to thirty percent (30%) of protocol fees collected in \$OVAX are permanently burned. The exact burn percentage is set by governance within a 20%–30% band, so that sustained platform usage trends the circulating supply below 100,000,000 \$OVAX over time.

6.5 Vesting Schedule Summary

Month	TGE	M6	M12	M24	M48
Circulating %	12%	23%	38%	62%	100%

7. Roadmap

The OVAX-AI roadmap is grouped into four phases. Dates are indicative and subject to adjustment, but the sequencing is firm: legal readiness and platform stability take priority over speed-to-market.

Phase 1 — Foundation

- Legal entity
- Testnet live
- Private sale

Phase 2 — Mainnet & TGE

- Public TGE
- CEX listing
- OVAX Vault v1

Phase 3 — Ecosystem

- AI Risk Simulator
- Grants program
- 40+ jurisdictions

Phase 4 — Maturity

- Cross-chain bridges
- Institutional suite
- DAO handover

8. Governance

OVAX-AI governance evolves through a progressive decentralization model. At launch, a core committee composed of the founding team and independent advisors retains emergency powers. Over time, those powers transfer to \$OVAX holders through an on-chain governance module.

Governance Process

- **Signaling.** Any \$OVAX holder may post a signaling proposal on the community forum.
- **Formal vote.** Once a proposal meets quorum, it proceeds to an on-chain vote with a 72-hour voting window.
- **Execution.** Passing proposals enter a timelock (typically 48 hours) before taking effect, so holders can review the outcome before it activates.

9. Legal & Compliance Approach

OVAX-AI's legal content is developed in consultation with independent legal advisors and is designed to be jurisdiction-aware rather than one-size-fits-all.

9.1 Jurisdictional Approach

OVAX-AI maintains a living knowledge base of asset-related regulation across multiple jurisdictions. Users whose questions touch a specific jurisdiction are shown the relevant local context alongside the general answer.

9.2 Data Protection

Personal data submitted to OVAX-AI is handled under standard data-protection practice, with user rights to access, correction, and deletion consistent with applicable regimes such as GDPR and CCPA.

9.3 Independence From Legal Advice

Nothing produced by OVAX-AI constitutes legal advice or creates an attorney-client relationship. Content is informational. Users who need advice specific to their situation are directed to an independent, licensed lawyer through the platform's referral feature.

10. Frequently Asked Questions

What exactly is OVAX-AI?

OVAX-AI is an AI platform that provides global legal intelligence for assets. It helps users understand asset-related laws, regulations, and legal risks, and connects them with independent legal professionals when expert assistance is needed.

Is OVAX-AI a law firm?

No. OVAX-AI is an AI legal information assistant with professional referral support. It does not provide legal advice, represent users, or issue official legal conclusions.

What is the total supply of \$OVAX?

The total supply is permanently fixed at 100,000,000 \$OVAX. There is no inflation and no admin minting.

How does the 10% referral work?

When someone you refer makes a purchase, you receive a 10% reward, paid in \$OVAX.

How is user data handled?

Personal data is handled under standard data-protection practice, with user rights to access, correction, and deletion consistent with applicable regimes such as GDPR and CCPA.

Is OVAX-AI available in my country?

OVAX-AI aims to respect local law. Some features may be configured or unavailable per jurisdiction. Always check the in-app jurisdiction indicator, and consult local counsel for advice specific to your situation.

Why Binance Smart Chain?

BSC offers a widely adopted, EVM-compatible environment with deep liquidity and a large developer community, which the \$OVAX token is built on.

How do I get involved?

Join the community channels, refer others to earn rewards, stake \$OVAX, or participate in governance once you hold \$OVAX.

11. Risk Disclosures

This document is provided for informational purposes only and does not constitute legal, financial, or investment advice. Digital assets, including \$OVAX, involve a high degree of risk. The following non-exhaustive list summarizes principal risks participants should understand:

- **Not legal advice.** Content produced by OVAX-AI, including AI-generated answers, is informational and may be incomplete, outdated, or inapplicable to a specific situation. Always confirm important decisions with a licensed professional in your jurisdiction.
- **Regulatory risk.** Regulation of digital assets and AI-generated content continues to evolve and may change in ways that affect the platform's availability or features.
- **AI limitations.** AI systems can make mistakes, reflect gaps in their training data, or present information with unwarranted confidence.
- **Technical risk.** Smart contracts and software systems may contain undiscovered vulnerabilities despite testing and review.
- **Market risk.** The market price of \$OVAX may be highly volatile.
- **Counterparty risk.** Integrations with third parties — exchanges, custodians, referred legal professionals — introduce dependencies outside the platform's direct control.

Prospective participants are strongly encouraged to consult independent legal, tax, and financial advisors before acquiring or using \$OVAX, or before acting on information provided by OVAX-AI.

12. Conclusion

OVAX-AI exists to close a specific gap: people who own or are considering digital and real-world assets rarely have easy access to clear, jurisdiction-aware legal information — and even less access to a straightforward path to a licensed professional when they need one.

By combining a structured legal knowledge base, an AI assistant that explains regulation in plain language, and a growing network of independent legal professionals, OVAX-AI helps users ask better questions, understand their options, and know when it is time to bring in expert help.

Our commitment is simple: help people understand the law around their assets, be transparent about what the platform can and cannot do, and connect users with the right expertise when general information is not enough.

OVAX-AI

Global AI Legal Intelligence for Digital Assets
